BACKEND

- PHP
- LARAVEL
- JAVA
- DART

About Me

I am a motivated and detail-oriented computer science student with a strong interest in software testing, cloud computing, and web development. Through academic projects and internships, I've gained hands-on experience in both frontend and backend development using tools like JavaEE, Bootstrap, Ajax, jQuery, Laravel, and MySQL. I enjoy solving problems, collaborating in team environments and continuously learning new technologies. My ability to adapt quickly, combined with a strong sense of responsibility and a passion for quality, makes me a valuable contributor to any IT project.

WORK EXPERIENCE

May 2025 – Present

Junior Developer — SSE Web Solution Company

As a Junior Developer at SSE Web Solution Company, I worked on POS (Point of Sale) websites with a strong focus on backend development. I developed and maintained RESTful APIs using Swagger for Flutter mobile integration, handled database queries, and optimized data flow between frontend and backend systems. I also modified customer-generated reports, assisted in UI/UX design, and contributed to new project development by implementing key parts of the MVC architecture.
